CDP Shield

TianyuGao

About Me

I am a solo developer with over 10 years of experience in Big Data, 5 years at HSBC, and 1 year focused on learning DeFi and Web3 technology to create innovative solutions.

$500M+

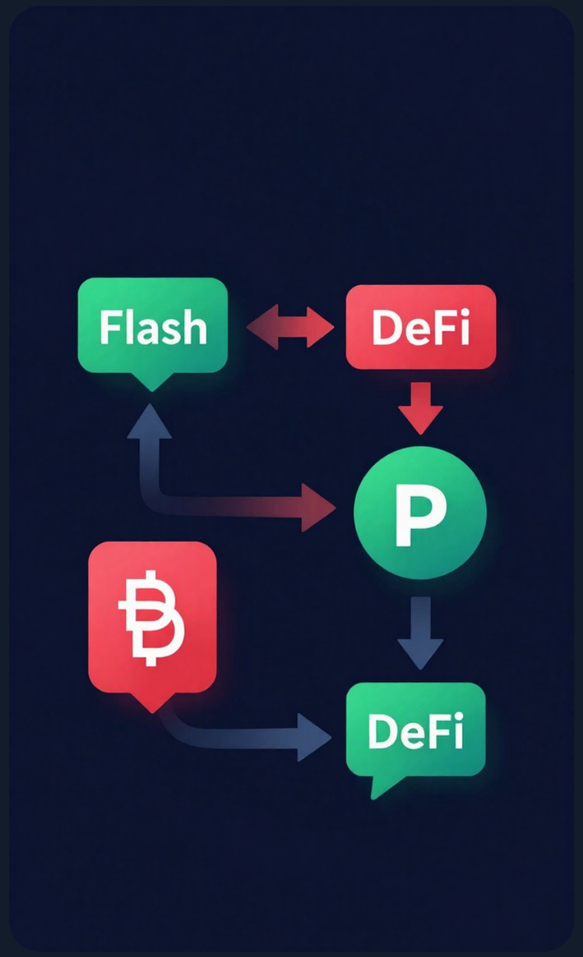

Lost to DeFi Liquidations Every Year

Every year, the DeFi market experiences losses exceeding $500 million due to liquidations, impacting countless users and highlighting the urgent need for effective monitoring and protection systems.

Our Innovative Solutions for DeFi Liquidation

Real-time Monitoring

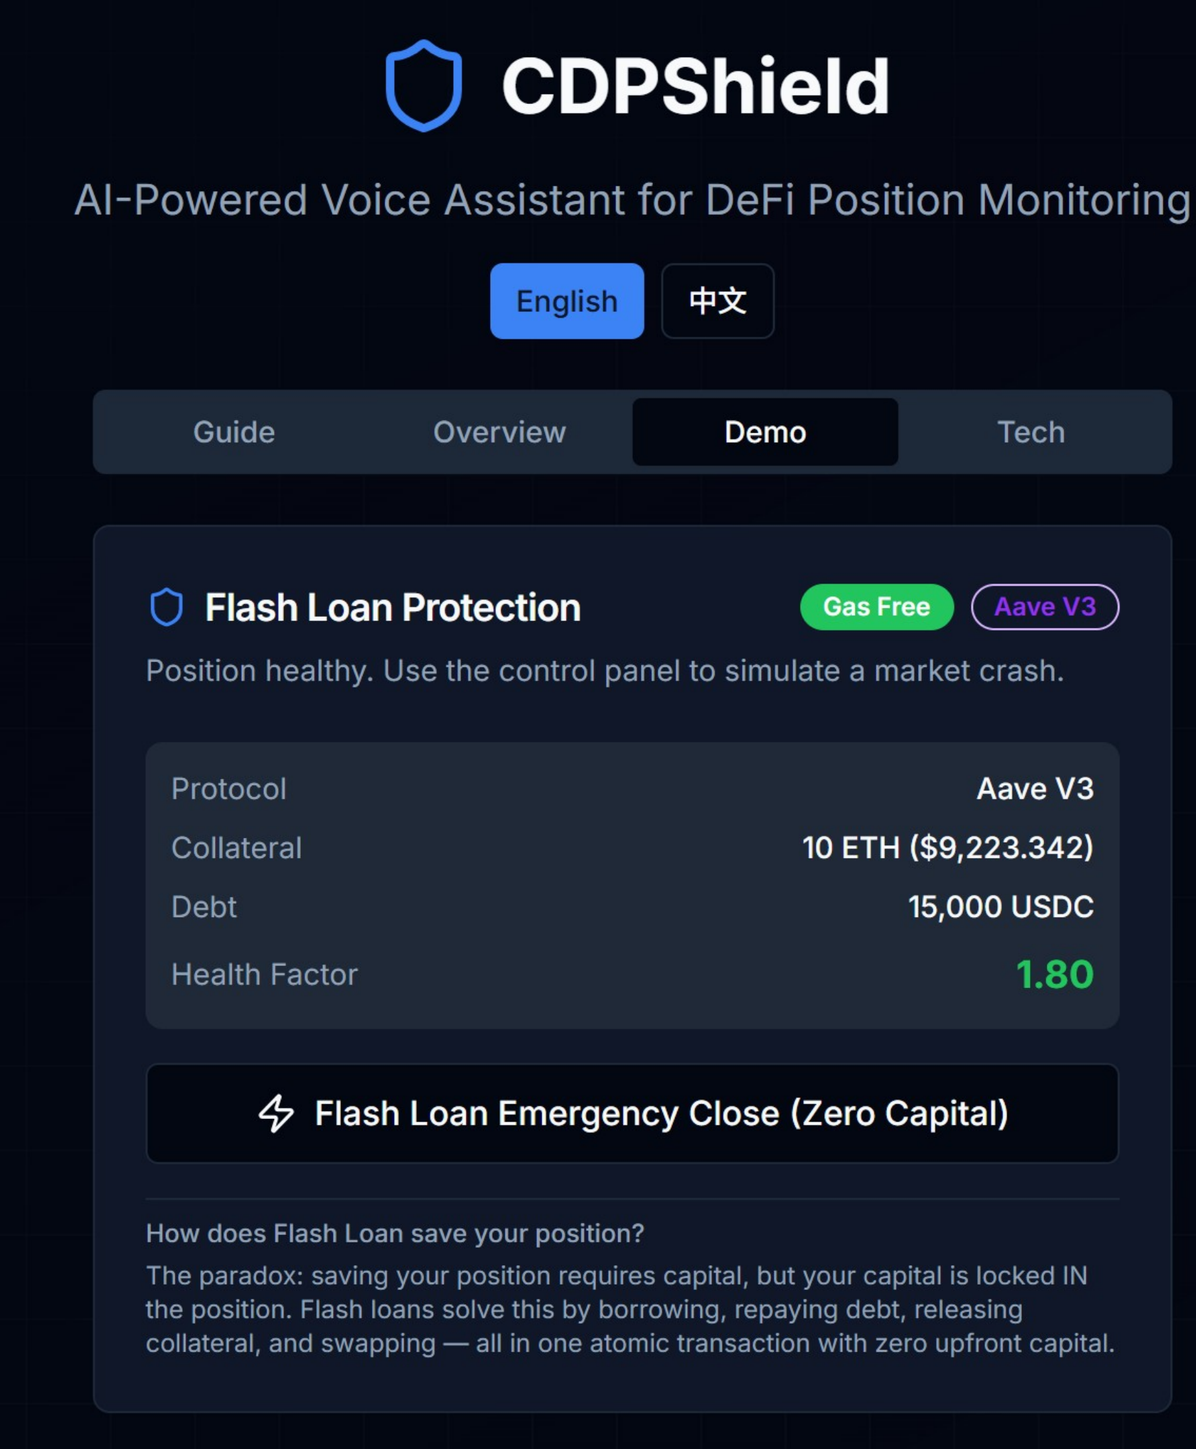

Continuous tracking ensures timely liquidation alerts.

Flash Loan Protection

Safeguard assets with atomic transaction security.

Product Dashboard

The **dashboard UI** of CDP Shield presents real-time data on collateral, borrowed amounts, and health factors. This intuitive interface helps users monitor their positions effectively, ensuring proactive management of their assets.

Flash Loan Process

Borrow

The user initiates a flash loan by borrowing the required funds almost instantly, enabling the utilization of liquidity without upfront capital requirements in the blockchain network.

Repay & Release

After utilizing the borrowed funds, the user repays the loan within the same transaction, ensuring that the process occurs seamlessly and without any capital loss.

Swap

The user conducts necessary swaps, exchanging borrowed assets for other digital currencies or tokens to meet specific investment or liquidation goals during the transaction.

Repay Loan

The final step involves repaying the loan along with any fees incurred, completing the process while maintaining the integrity of the user's assets and capital.

System Architecture Overview

The **CDP Shield** utilizes smart contracts deployed on BASE Sepolia, supported by a frontend stack leveraging Next.js and Coinbase Smart Wallet, ensuring low gas fees and efficient user experience.
